Hello there,

A little bit about me, my name's Al Bondad, and I'm a developer based in Illinois with over 2.5 years of experience working with startups and companies. I enjoy working with new technologies, learning new skills, and finding new solutions to get the job done.

Regarding my experience, I've worked in several different roles. I started my career with Zaner, a financial service company as a contracted **UI and UX Developer**, building the front-end of their web applications and providing application designs. After that, I continued my career working with Gyst Audio, a startup audio service company, starting as an intern, and continuing as a contracted **Front-End Developer**, working on web projects, such as building a media player for clients, developing a web application to help review audio recordings, designing an analytics dashboard for clients, and assisting other interns with their projects. During my time working with Gyst Audio, I took on extra contracted work as a **Web Developer** at Lifetime UI developing a React UI library, and worked as a **Full Stack Developer Intern** at Halo Science, a startup company focused on connecting researchers with their web platform. Following Gyst Audio, I started my full-time role as a **Software Developer** at Bodhi, a software company focused on audio/video device management, where I led the front-end development for new hospitality and travel related web applications and websites, worked with a team of full stack developers to maintain, debug, and grow existing web applications, and researched and discussed new solutions to improve our front-end development.

Regarding my current skills, I have experience with technologies such as **React, Redux, Next.js, Formik, React Query, Material UI, Semantic UI, Node.js, Express, Javascript, Typescript, HTML, and CSS**. I also have experience with **Git, GitHub, and GitLab**, and some familiarity with **C++, Java, Python**. I've also used **Adobe XD, Figma, and Gimp** when working with design files.

You can view my work and project experience I attached in my resume, along with links to my portfolio, LinkedIn, GitHub, and other contact information. If you have any questions about me, please don't hesitate to leave a message!

I enjoy new challenges and experiences and would be pleased to learn more about this position, and I hope I can use this opportunity to be a future asset to your organization.

Thank you for your time and consideration.

Regards,
Al Bondad
